1,	À nes	kind of non-woven te	ertile was being de	eveloped at the Text	ile Research
1.	Insti	tute in Brno during 1	951. This new mat	erial was produced	in the following
1,	Insti manne	tute in Brno during 1 r: first, a layer of	951. This new mat thermoplastic shee	erial was produced t	in the following
1.	Insti manns Then	tute in Brno during 1 r: first, a layer of another warp cut to s	951. This new mat thermoplastic shee ise, the length of	erial was produced : st was laid upon and which was identical	in the following endless warp.
1.	Insti manne Then width	tute in Brno during 1 r: first, a layer of another warp cut to s of the first warp, w	951. This new mat thermoplastic shee ise, the length of as laid across the	erial was produced : st was laid upon and which was identical thermomiastic sheet	in the following endless warp. I with the the the whole
1.	Insti	tute in Brno during 1 r: first, a layer of snother warp cut to s of the first warp, w was pressed together	951. This new mat thermoplastic shee ise, the length of as laid across the at a high tempera	erial was produced of was laid upon and which was identical thermplastic sheethers. This material	in the following chiless warp. I with the t. The whole
1.	Insti	tute in Brno during 1 r: first, a layer of snother warp cut to s of the first warp, w was pressed together h higher tensile stre	951. This new mat thermoplastic shee ise, the length of as laid across the at a high tempera	erial was produced of was laid upon and which was identical thermplastic sheethers. This material	in the following chiless warp. I with the t. The whole
1.	Insti	tute in Brno during 1 r: first, a layer of snother warp cut to s of the first warp, w was pressed together	951. This new mat thermoplastic shee ise, the length of as laid across the at a high tempera	erial was produced of was laid upon and which was identical thermplastic sheethers. This material	in the following chiless warp. I with the t. The whole
	Insti- menne Then vidth sheet a muc woven	tute in Brno during l r: first, a layer of snother warp cut to s of the first warp, w was pressed together h higher tensile stra textile.	951. This new mat thermoplastic shee ise, the length of as laid across the at a high tempera agth in both direc	terial was produced of was laid upon and which was identical thermoplastic sheet there. This material tions than any other	in the following chiless warp. I with the t. The whole I possessel r kind of non-
1,	Insti- menne Then width sheet a muc woven	tute in Brno during l r: first, a layer of another warp cut to s of the first warp, w was pressed together h higher tensile stre textile.	951. This new mat thermoplastic sheetise, the length of as laid across the at a high tempera agth in both director.	erial was produced of was laid upon and which was identical thermoplastic sheet there. This material tions than any other engaged in experiment	in the following chiless warp. I with the t. The whole i possesse r kind of non-
	Institution of the sheet a much woven In 19 of co	tute in Brno during l r: first, a layer of another warp cut to s of the first warp, w was pressed together h higher tensile stre textile. 51, the Textile Reseatton wool made from s	951. This new mat thermoplastic sheetise, the length of as laid across the at a high tempera agth in both direct rck Institute was ilon. Silon fiber	erial was produced in the state of the state	in the following endless warp. I with the t. The whole i possesset r kind of non- real production microscopic
	Institution of the sheet a mode woven In 19 of co-	tute in Brno during l r: first, a layer of another warp cut to s of the first warp, w was pressed together h higher tensile stre textile. 51, the Textile Resea tton wool made from s ess by means of an air	951. This new mat thermoplastic sheet ise, the length of as laid across the at a high tempera agth in both direct rck Institute was ilon. Silon fiber r jet and then gat	terial was produced in the was laid upon and which was identical theresplastic sheet ture. This material tions than any other engaged in experiments were stretched to have do as to form	in the following endless warp. I with the t. The whole i possesset r kind of non- real production microscopic
	Institution of the sheet a mode woven In 19 of co-	tute in Brno during l r: first, a layer of another warp cut to s of the first warp, w was pressed together h higher tensile stre textile. 51, the Textile Reseatton wool made from s	951. This material tions than any other engaged in experiments were stretched to have do as to form	in the following endless warp. I with the t. The whole i possesset r kind of non- real production microscopic
2.	Institution of the sheet a much woven In 19 of co finen simil	tute in Brno during l r: first, a layer of another warp cut to s of the first warp, w was pressed together h higher tensile stre textile. 51, the Textile Resea tton wool made from s ess by means of an ai ar to cotton wool. I	951. This new mat thermoplastic shee ise, the length of as laid across the at a high tempera agth in both direct rch Institute was ilon. Silon fiber r jet and then gat do not know any d	terial was produced in the state of the stat	in the following endless warp. I with the t. The whole i possessed r kind of non-real production microscopic a material
	Insti- menne Then width sheet a muc woven In 19 of co- finen simil	tute in Brno during lar; first, a layer of another warp cut to so of the first warp, was pressed together higher tensile strategie. 51, the Textile Reseation wool made from some seaso by means of an air art to cotton wool. I perimental arrangement	951. This new mat thermoplastic shee ise, the length of as laid across the at a high tempera agth in both direc- rch Institute was ilon. Silon fiber r jet and then gat do not know any d	terial was produced in the state of the stat	in the following endless warp. I with the t. The whole i possessed r kind of non- real production microscopic a material
2.	Insti- menne Then Width sheet a muc Woven In 19 ef co finen simil An ex spinn	tute in Brno during lar; first, a layer of another warp cut to a of the first warp, was pressed together higher tensile stratestile. 51, the Textile Reseation wool made from a case by means of an air ar to cotton wool. I perimental arrangementing centrifuge was defined as the control of th	951. This new mat thermoplastic sheetise, the length of as laid across the at a high tempera agth in both direct rch Institute was ilon. Silon fiber r jet and then gat do not know any d t for spinning will veloped at the Ins	terial was produced in the was laid upon and which was identical thermoplastic sheet there. This material tions than any other engaged in experiment were stretched to thered to as to form tetals. On yourn by means of titute in 1951 and a	in the following endless warp. I with the t. The whole i possessed r kind of non- real production microscopic a material a pot
2,	Insti- menne Then width sheet a muc woven In 19 of co finen simil An ex spinn begin	tute in Brno during 1 r: first, a layer of another warp cut to a of the first warp, w was pressed together h higher tensile stre textile. 51, the Textile Resea tton wool made from a eas by means of an air ar to cotton wool. I perimental arrangemen ing centrifuge was de- ning of 1952. In the	951. This new mat thermoplastic sheet ise, the length of as laid across the at a high tempera angth in both direct rch Institute was ilon. Silon fiber r jet and then gat do not know any d t for spinning sil veloped at the Ins spring of 1952 it	terial was produced in the was laid upon an in which was identical thermoplastic sheet ture. This material tions than any other engaged in experiments were stretched to hered to as to form tetails. On yourn by means of titute in 1951 and a was handed over form	in the following endless warp. I with the t. The whole i possessed r kind of non- I with production microscopic a material a pot the further
2.	Insti- menne Then width sheet a muc woven In 19 of co finen simil An ex spinn begin	tute in Brno during lar; first, a layer of another warp cut to a of the first warp, was pressed together higher tensile stratestile. 51, the Textile Reseation wool made from a case by means of an air ar to cotton wool. I perimental arrangementing centrifuge was defined as the control of th	951. This new mat thermoplastic sheet ise, the length of as laid across the at a high tempera angth in both direct rch Institute was ilon. Silon fiber r jet and then gat do not know any d t for spinning sil veloped at the Ins spring of 1952 it	terial was produced in the was laid upon an in which was identical thermoplastic sheet ture. This material tions than any other engaged in experiments were stretched to hered to as to form tetails. On yourn by means of titute in 1951 and a was handed over form	in the following endless warp. I with the t. The whole i possessed r kind of non- I with production microscopic a material a pot the further
2.	Insti- menne Then width sheet a muc woven In 19 of co finen simil An ex spinn begin	tute in Brno during 1 r: first, a layer of another warp cut to a of the first warp, w was pressed together h higher tensile stre textile. 51, the Textile Resea tton wool made from a eas by means of an air ar to cotton wool. I perimental arrangemen ing centrifuge was de- ning of 1952. In the	951. This new mat thermoplastic sheet ise, the length of as laid across the at a high tempera angth in both direct rch Institute was ilon. Silon fiber r jet and then gat do not know any d t for spinning sil veloped at the Ins spring of 1952 it	terial was produced in the was laid upon an in which was identical thermoplastic sheet ture. This material tions than any other engaged in experiments were stretched to hered to as to form tetails. On yourn by means of titute in 1951 and a was handed over form	in the following endless warp. I with the t. The whole i possessed r kind of non- I with production microscopic a material a pot the further
